Program Description

Installation

Windows

1. Download [the latest release](#) for Windows (alphamap_installer_windows.exe) from the GitHub repository and open the .exe file.
2. In the “User Account Control” dialog asking about permission for the app to make changes to your device press the “Yes” button.
3. In the appearing “Setup – alphamap version X.X.X” dialog window accept the License Agreement and press the “Next” button.

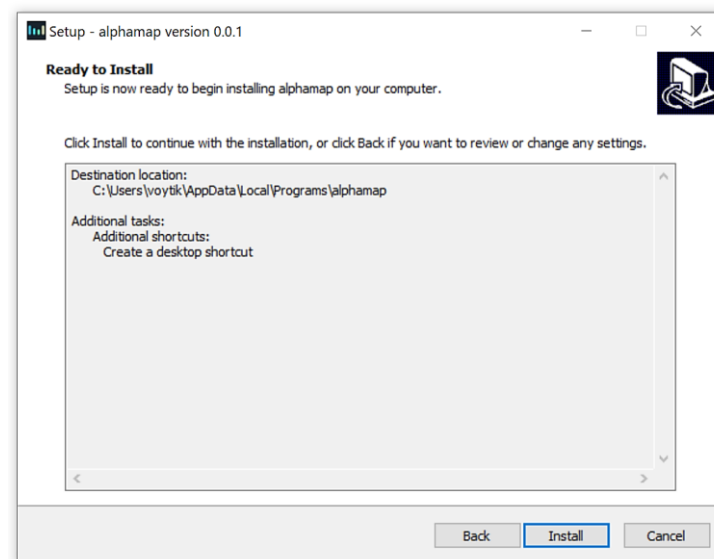

4. Select the destination location for the installation of AlphaMap software (the size of the whole package is 994.6 MB) and press the “Next” button.

5. In the next dialog window mark the “Create a desktop shortcut” check box and press the “Next” button.

6. Check the setting and if everything is correct, press “Install” button. You may go back to change some settings using the “Back” button or “Cancel” the installation.

7. Wait till the installation process is finished and with the marked “Launch alphamap” check box press the “Finish” button.
8. In the appearing “Windows Security Alert” dialog window press the “Allow access” button that will prevent the Windows Defender Firewall from blocking the AlphaMap tool on your PC.
9. Check your default browser (Google Chrome or Mozilla Firefox are suggested for the fast

running of the AlphaMap) and start working with the tool.

* If you install AlphaMap for all users, you might need admin privileges to run it (right-click on the AlphaMap logo on your desktop and select "Run as administrator").

MacOS

1. Download [the latest release](#) for macOS (alphamap.app.zip) from the GitHub repository, unzip the file and move it to your applications folder. By doing it, you accept the terms of the AlphaMap license agreement and all third-party licenses.
2. Launch the file and take into account that the first opening of the tool on macOS takes a long time to load. The loading time will be significantly reduced upon the second launch.
3. Check your default browser (Google Chrome or Mozilla Firefox are suggested for the fast running of the AlphaMap) and start working with the tool.

* If nothing happens when you launch AlphaMap, you might need to grant it permissions by going to the macOS menu "System Preferences | Security & Privacy | General". If the problem still persists, it is possible that macOS already quarantined the AlphaMap app. It can be removed from quarantine by running `<xattr -dr com.apple.quarantine alphamap.app>` (copy everything between <>) in your terminal in the application folder where alphamap.app is located.
